## Your Complete Solution for Industrial Label Lifecycle Management

### Confidence in Your Label Processes

Labeling has become an integral component within the production process, ensuring products are correctly and professionally identified and branded. The increased complexity surrounding the labeling process, as well as the need for organizations to grow and expand their footprint on a regional, if not a global scale, has made manual, single site labeling processes unmanageable and expensive.

- Labels frequently need to be revised, changed or modified
- Product variations require individual labels to be created for each product variant
- There are multiple PCs used for labeling on a production line
- Technical requirements change to embrace new technologies (2d barcodes, RFID, GS1 codes)
- Product Information becomes too complex to manage in Excel and Word documents
- Packaging and labels need to be designed, reviewed, or approved with (or by) customers, suppliers and partners
- Change control is required or desired on label
- Labels need to be created for multiple languages

In order to be truly confident in their labeling processes, organizations need to have complete control over production quality and accuracy.

### How PRISYM ID Can Help

PRISYM Enterprise is a purpose designed label lifecycle management solution specifically developed to assist companies with label creation, review, revision and printing in multiple locations. Our labeling expertise has helped companies in a range of industries including automotive, chemical, life sciences, food and beverage, logistics and shipping, aerospace, textile and administrative.

A wide range of options makes PRISYM Enterprise a perfect and easy-to-use, wizard driven tool for any labeling requirement, including 2d barcodes, RFID or compliance labeling.

PRISYM Enterprise provides a secure environment for label design, data management, approval, automated gathering of variable data and printing. It provides control over label design, content and records all critical activities and electronically links them to individual users along with time and date stamping.

PRISYM Enterprise provides a central solution for label design which automatically maintains version information and enforces appropriate access controls. This simplifies the process of review and revision and ensures that production users and designers can only access the appropriate files and data.

PRISYM Enterprise is built upon a robust rule set which ensures that only approved labels can be printed on the production line. This capability ensures that labels which have not been rigorously reviewed cannot be printed by the manufacturing users.

PRISYM Enterprise is available as a client/server-based application or a web-based solution. PRISYM ID supplies a total solution from requirement gathering to configuration of the software and integration with existing systems such as Manufacturing, Finance, PLM and ERP.

PRISYM Enterprise enables you to:

- Implement one complete, secure solution to fulfill the labeling process within your organization
- Ensure complete history is maintained through the system
- Speed up label production by reducing or removing human inputs
- Design barcode labels easily and quickly via the web
- Print the right label at the right time with the right data by removing human error
- Reduce duplication and easily manage label designs with data driven printing
- Design labels for localized or global use
- Construct security policies to suit your organization
- Reprint any label printed at any time on any printer anywhere within your organization
- Reconcile and account for every label printed throughout the organization
- Manage and control label critical data in a version controlled database
- Reduce the number of label formats needed by using variables on the label designs
- Centralize your labeling management into one easy to use solution

In addition, our web-based solution offers you:

- An Internet Explorer based solution which is quick to deploy and can be used 'outside' the organization for selected partners, customers or suppliers
- A proactive review and approval work engine which increases the accuracy of layout and data used on labels reducing the likelihood of product recalls
- The capability to apply version control and approval to any other electronic document within your organization whether related to labels or not

### Coding Technologies

PRISYM Enterprise includes our best-of-breed barcode creation software module. It enables you to produce over 35 types of codes including Linear, 2D, GS1 DataBar, ITF14, EAN, DataMatrix, Code 39, 128, 93 and QR codes.

RFID tags including Picotag, ISO 15693, I Code, Tag-It, UHF EPC, Gen2 (DoD, GIAI, GID, GRAI, SGLN, SGTIN, SSCC), and UCode EPC are also supported.

### Print Production

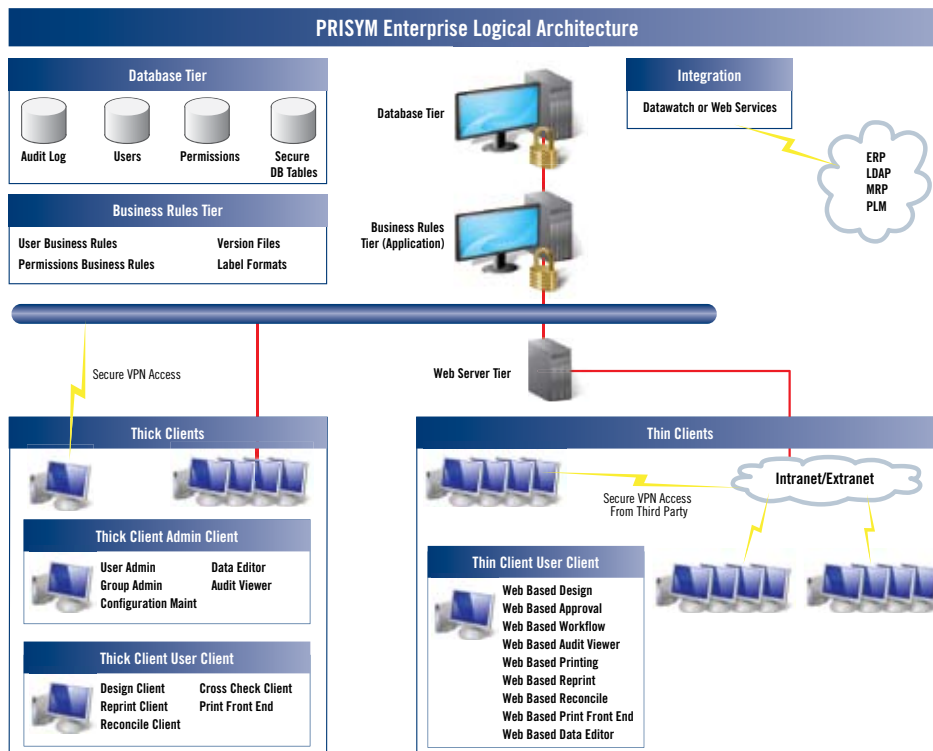

Prisym Enterprise includes drivers for over 500 different printer families which include a variety of different printer technologies including thermal transfer, inkjet and industrial laser printers. These dedicated drivers ensure that your printed labels look exactly as you designed them and that they are printed as quickly as possible. We include support for many different manufacturers including Zebra, SATO, Toshiba TEC, Avery, Domino and many more. See our website for a complete list.

### Unrivalled Support Services

The PRISYM ID team have specialist knowledge to make sure you know the “do’s and don’ts” of labeling. PRISYM Enterprise includes software maintenance as part of the solution to make sure you have full peace of mind.

We offer software support services that will seamlessly manage your company’s needs from troubleshooting to upgrades, re-installation, and configurations. Our software support services include:

- Helpdesk hotline
- Onsite software support
- SLA levels to suit your requirements
- 24/7 support options
- Access to the latest software version
- On / off site customer training
